## ABOUT ME

---

Bachelor's graduate in Computer Science from BINUS University with professional experience as a Full-Stack Developer and Software Engineer. Skilled in HTML, CSS, JavaScript, Nuxt.js, Node.js, Vue.js, PHP, and NoSQL databases such as Firestore, with strong expertise in performance optimization, system architecture, and cross-functional collaboration. Experienced in developing and maintaining custom CMS platforms, building company profile websites, managing cloud environments through Google Cloud Console, and utilizing Azure DevOps for reporting, task tracking, and project coordination.

## WORK EXPERIENCE

---

### Web Developer

Sept 2022 – Current

Kompas Harian (KG Group)

- Developed a CMS to support article creation and content management for websites and mobile applications using Nuxt.js and Vue.js.
- Converted design assets from Figma mockups into responsive user interfaces.
- Maintained websites and landing pages to ensure optimal performance, usability, and reliability through Google Cloud Console.
- Built APIs using Express.js to support article delivery and data integration for the website.
- Implemented new features based on business and website requirements.
- Created Proof of Concepts (POCs) to evaluate and validate new website features.

### IT Support

Jan – Sept 2022

PT Integrasi Logistik Cipta Solusi

- Identified and resolved apps issues through database-level investigation and system optimization.
- Resolved payment system issues by updating and improving database structures and processes.
- Collaborated cross-functionally with the Customer Service team to track and resolve reported bugs.
- Monitored and maintained the health and performance of the server environment.
- Developed new features and maintained internal and client-facing web applications to ensure performance and stability.

### Web Developer

Aug – Dec 2021

Ericsson

- Developed a ticketing application using Laravel for efficient issue tracking and documentation.
- Monitored system performance and performed ongoing bug fixes to ensure application stability.
- Escalated complex issues and progress updates to the team lead for further resolution.

## Web Developer

Sept 2019 – Aug 2021

PT Transcosmos Indonesia

- Developed and maintained client applications such as Kawasaki, JEC, and J-Trust using PHP.
- Monitored website performance and delivered regular reports to ensure optimal functionality.
- Contributed to the development of the company's survey application to support CSAT (Customer Satisfaction) measurement initiatives.
- Supported the Project Manager in delivering, analyzing, and implementing client requirements.

## Web Administration

May 2018 – Aug 2019

PT Transcosmos Indonesia

- Updated and managed website content using CMS platforms such as TeamSite.
- Conducted cross-browser and cross-platform testing to ensure consistent functionality and compatibility.
- Converted PSD and Adobe XD design files into responsive web interfaces using HTML, CSS, and JavaScript.

## Web Developer

Oct 2017 – Apr 2018

BelanjaBekas.com

- Developed E-commerce application using Laravel.
- Maintain and solving issue on server application.
- Implement new features of website needs.
- Manage database system using MySQL and MariaDB.

## EDUCATION

---

### S1 Computer Science

2013 – 2017

Universitas Bina Nusantara

## SKILLS

---

### Hard Skill

#### Website

- Nuxt.js & Vue.js
- Tailwind CSS
- MySQL & Firestore
- Express.js
- PHP (Laravel)
- Laravel
- GitHub
- HTML
- Linux
- Node.js
- Google Cloud Console
- MariaDB

#### Design

- Figma
- Canva
- Adobe Photoshop

#### Report

- Microsoft Office
- Microsoft Teams
- Microsoft Sharepoint
- Azure DevOps
- Slack
- Trello

### Soft Skill

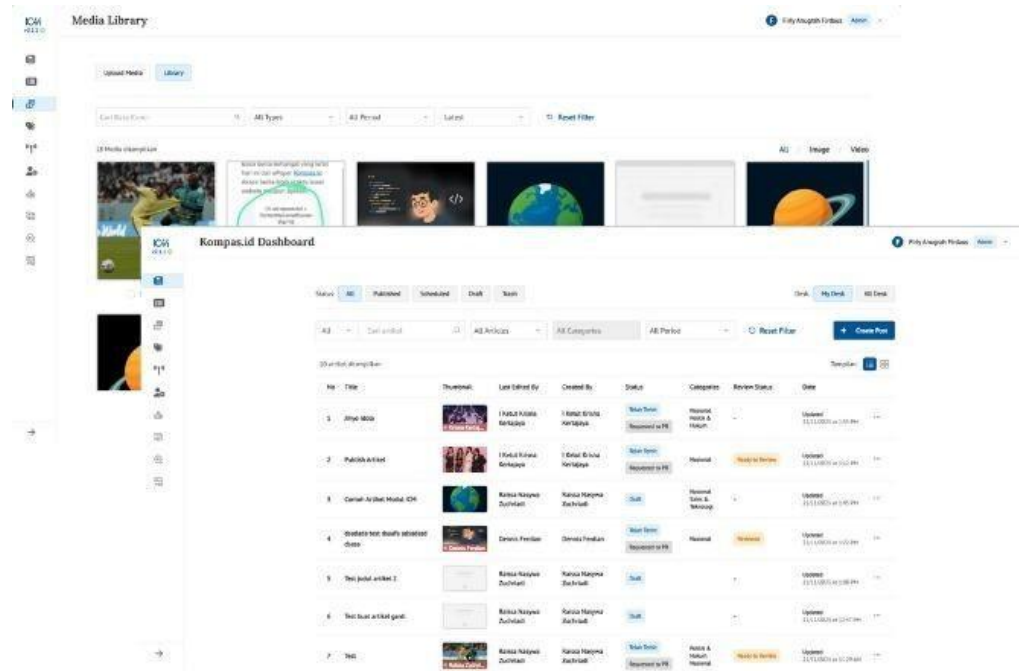

- Problem-solving
- Teamwork and collaboration
- Adaptability to change other technologies
- Critical thinking
- Strong willingness to learn new skills

# PORTFOLIO

## Interactive Content Management (Article CMS Dashboard)

ICM focused on developing a content management system (CMS) for article creation and website content management. The application enables users to manage media assets, update the website homepage, and handle other core website features. It was built using Nuxt 3, Tailwind CSS, Firestore, Keycloak for authentication, and OpenSearch / Algolia for search functionality.

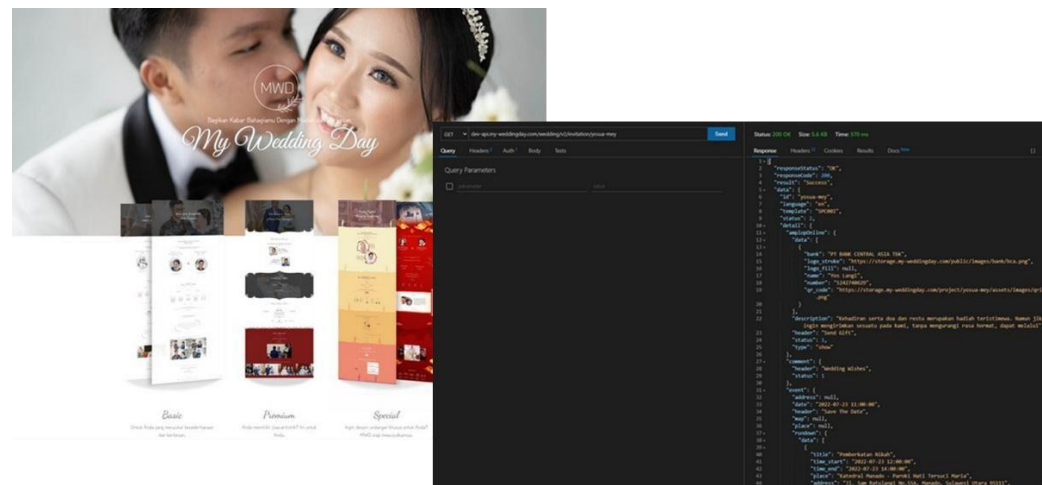

Tools: Nuxt 3, Tailwind CSS, Firestore, and Keycloak | Client: Harian Kompas

## My Wedding Day (Invitation Online)

Freelance project with my college peers to develop an online wedding invitation platform. My primary responsibilities included building the back-end system, developing RESTful APIs, and managing the server. I also assisted in developing the front end for new and existing templates when needed. The system was built using Laravel and Lumen as the core frameworks.

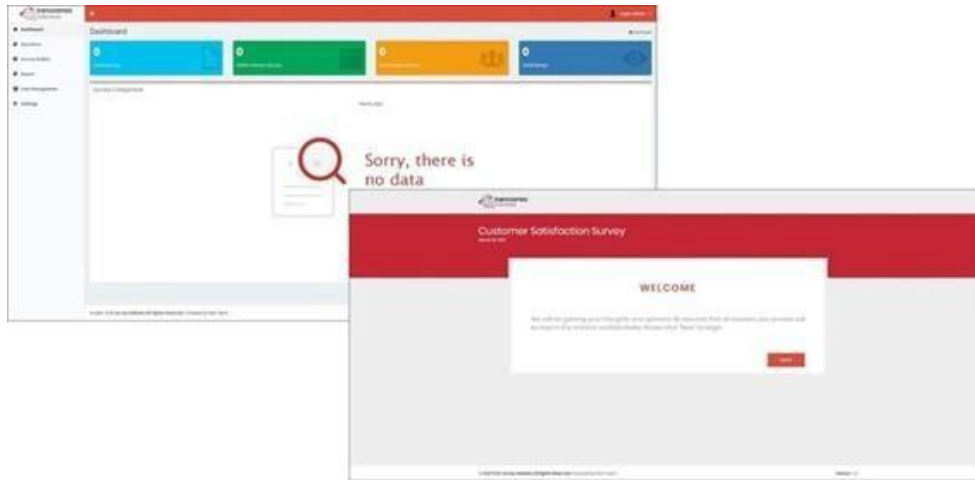

Tools: Vue 3, Tailwind CSS, and MySQL

## Survey Application Website

Internal project that focused on developing a web-based survey platform. My responsibilities included building the survey front-end and developing back-end modules, including the dashboard, question management, and reporting system. Major features I implemented were the question bank and parent – child question logic, enabling more structured and dynamic survey flows.

Tools: Codeigniter 3, JQuery, JQuery Step, and Bootstrap | Client: Transcosmos Indonesia

## Client's Admin Dashboard

This project involved the development of an administrative dashboard for a website. The features I developed include email and SMS notifications, customer management, and reporting modules.

Tools: Codeigniter 3, JQuery, and Bootstrap | Client: Jtrust
